7592814801 | anjaliachuthan2000@gmail.com | Thrissur, Kerala

PROFESSIONAL SUMMARY

B.Tech Computer Science graduate with 1.5+ years of professional experience in React Native mobile app development and Python full-stack development. Delivered frontend for multiple government-grade enterprise applications including HRMS, e-commerce, and civic management platforms. Proficient in cross-platform iOS and Android development, App Store (iOS) and Play Store (Android) deployment, mobile security hardening (SSL pinning, root detection, tamper detection), and state management with Redux. Available immediately.

TECHNICAL SKILLS

Mobile Development: React Native, JavaScript, TypeScript (iOS & Android)

App Deployment: Apple App Store (iOS), Google Play Store (Android)

Web & Backend: React.js, Python, Django, HTML, CSS, Bootstrap

Databases: PostgreSQL, MySQL

State Management & Tools: Redux, Git, GitLab, Postman

Push Notifications: Firebase Cloud Messaging (FCM), Firebase Console

Security: SSL Pinning, Root Detection, Tamper Detection, Frida Check

Other: Machine Learning, Computer Vision, Arduino

PROFESSIONAL EXPERIENCE

Junior Software Developer

Travidux Technologies Pvt Ltd | July 2024 – March 2026

- Developed complete React Native frontend for 5+ enterprise mobile applications across government and commercial sectors, delivering cross-platform iOS and Android experiences with responsive, user-friendly interfaces.
- Managed end-to-end app deployment to the Apple App Store (iOS) and Google Play Store (Android), including build configuration, provisioning profiles, signing certificates, and release management.
- Built and owned the full frontend for government projects including TCCL HRMS (leave, attendance, overtime, work permits, reports), Kudumbashree Urban Poverty Reduction Plan (member management, forms, reports), and KSEB Telephone Directory (employee contact and office directory system).
- Conducted mobile security audits for government-facing apps and resolved vulnerabilities including root detection, app tampering, Frida instrumentation, and SSL pinning — ensuring full compliance before deployment.
- Contributed to an ML-based biometric face punch system in Python for automated attendance logging within the HRMS platform.
- Managed state with Redux, tested APIs using Postman, and maintained codebases via Git and GitLab in close collaboration with the Python Django backend team.
- Integrated Firebase Cloud Messaging (FCM) for push notifications across multiple apps, managing notification configurations and testing via the Firebase Console.

Trainee Software Engineer

Quest Innovative Solutions | Dec 2023 – June 2024

- Completed an intensive Python Full Stack training program and built real-world mini-projects across frontend and backend development.
- Built Python desktop applications including a phonebook manager and GUI calculator using Tkinter; developed responsive web pages using HTML, CSS, and Bootstrap.
- Implemented CRUD operations and RESTful API concepts; built interactive UI components using JavaScript.

PROJECTS

BISUITE – ERP Mobile Application

React Native

- Developed complete React Native frontend for a full-featured ERP mobile application.

- Implemented Enquiry Services module including enquiry list management, follow-up tracking, and services list — enabling teams to manage client interactions end-to-end.
- Deployed the application to both Apple App Store and Google Play Store, handling all release configurations and compliance requirements.

Kudumbashree – Urban Poverty Reduction Plan

React Native, React.js, Python, Django

- Delivered complete React Native frontend for mobile app and React.js frontend for web portal for a Kerala government civic initiative.
- Features include member management, board member profiles, dynamic forms, and report generation; applied SSL pinning, root detection, and tamper detection for government compliance.

TCCL HRMS – Government HR Management System

React Native

- Developed full React Native frontend for a government HRMS mobile app covering leave, attendance, overtime, work permits, and reports.
- Executed complete mobile security audit — resolved root detection, tamper detection, Frida check, and SSL pinning vulnerabilities prior to deployment.

Support Incident Management App

React Native

- Built complete React Native frontend for a ticket-raising application for internal issue and complaint tracking with intuitive UI for ticket creation, status updates, and categorization.

KSEB Telephone Directory

React Native

- Developed React Native frontend for KSEB's employee directory app with contact details, office info, and department-level search; applied SSL pinning for government deployment.

E-Commerce Mobile App

React Native

- Built React Native frontend for a full-featured e-commerce platform with product browsing, cart, order flow, and user account management — comparable in scope to Flipkart/Amazon.

HRMS Biometric Face Punch System

Python, Machine Learning

- Contributed to a face recognition-based attendance system using ML algorithms and Python, integrated with the HRMS backend for automated attendance logging.

Driver Drowsiness Detection System

Python, Arduino, Computer Vision, ML

- Built a real-time driver drowsiness and fatigue detection system using Python, computer vision, and ML models to monitor driver alertness and trigger real-time alerts via Arduino.

Multimodal Document Classification

Python, Django, Deep Learning

- Developed a document classification model using ML and deep learning on the RVLCDIP dataset with a Python Django backend.

EDUCATION

B.Tech – Computer Science and Engineering | 2019 – 2023

Thejus Engineering College | CGPA: 7.81

Python Full Stack Developer Certification | July – Nov 2023

Quest Innovative Solutions
